University of Michigan
Ann Arbor, MI

DAIMLER

Transform and Automate your Security

Streamline your operational activities, access control systems, physical security and safety measures with one comprehensive workplace security solution for your peace of mind and confidence of your staff and customers.

\$170.4 billion to be invested in information technology security in 2022
(Source: Gartner)

10% of malicious security breaches were associated with physical security issues, with each breach costing organization **\$4.36 million** on average
(Source: IBM Cost of a Data Breach Report 2020)

Scylla AI-powered solutions can be installed on premise and integrated with the existing video surveillance infrastructure, not causing any extra costs and hassle. Scylla face recognition module is used to identify people sending information to your IAM provider (e.g. OKTA, Azure ID, etc) over an API which is there to provision and set up accounts for people based on the predefined level of access and restrictions in place.

This is the go-to solution to enable businesses:

- Provide a safe working environment
- Onboard newcomers quickly and safely
- Protect their assets, people and information
- Ensure compliance with COVID-19 protective measures
- Turn their security infrastructure into an adaptable, proactive and innovative system

How it works

1

Video feed from cameras is processed by Scylla AI modules

09:58am 05/10/2021
Employee check-in

Face recognition

09:58 am 05/10/2021

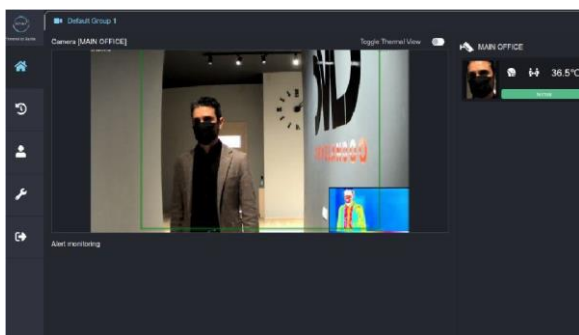

Name: Alex Johnson
Level of access: Manager
Check-in time: 09:58 am

COVID-19 compliance (face mask detection, thermal screening, etc.)

10 am 05/10/2021

Name: Alex Johnson
Temperature: 97.7° F
Facemask: YES

Whitelist/watchlist

2

Data is sent to the IAM provider (e.g. OKTA, Azure ID, etc.)

Provided there is an authentication profile available for the person identified, it is later processed through security protocols (e.g. OAuth2 SAML). In a flexible workplace the person can be attributed to a desk based on availability/preferences.

If the profile is absent, it will need to be created based on the predefined rules.

3

Data is processed through corresponding third-party integrations to provide the right access to the right employees and customers to facilities, accounts and information. Access to the network and VPN clearance will also be automatically created and revoked by predefined authentication protocols.

10:05 am 05/10/2021

Name: Alex Johnson

Level of access: Manager

Location: Server room

Access: **Access granted**

10:15 am 05/10/2021

Name: Alex Johnson

Level of access: Manager

Location: Elevator

Access: **Access to level 4 denied**

4

Access is fully revoked upon employee termination.

Create a Productive and Safe Office Environment

Rely on a comprehensive security solution for company-wide protection to keep your business running and team safe.

Customizable

The system can be tailored to suit your organization's priorities with the required functionality

Compliant

We collect the essential information in compliance with your network security protocols, GDPR, and other specific privacy requirements.

Proactive

The physical security software works in real time that allows your surveillance to be proactive rather than reactive in high-impact scenarios.

Efficient

Our system has reasonable hardware expectations and can be seamlessly integrated with the existing video management systems and cameras.

Scalable

Scylla physical threat detection software can scale in the enterprise environment due to the centralized architecture.

Optimize and protect your workspace, operations and team members with the **AI-powered access control solution**
