## Drone Security

Scylla AI technology effectively works on drone cameras with non-static environments and backgrounds keeping a watchful eye on your valued assets and operations.

Scylla Physical Threat Detection Technology Is Trusted By

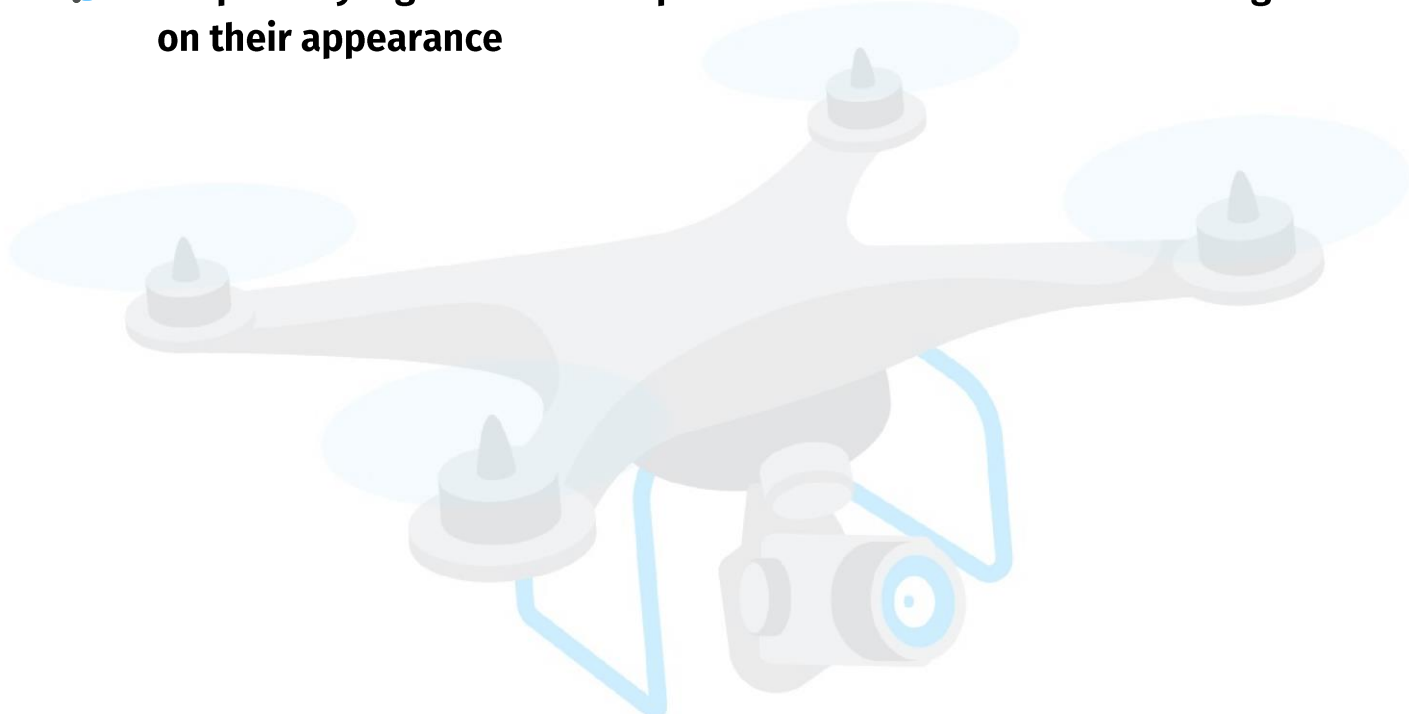

## Drone Security

Developed with security and businesses in mind, Scylla's cutting-edge technology can effectively work on cameras with non-static environments & backgrounds such as drones and bodycams.

Scylla uses proprietary algorithms for smart digital zooming and sophisticated, lightning fast detection and tracking. Keeping a watchful eye on individuals, operations and valued assets for your peace of mind.

Scylla AI enables users to automate surveillance, targeting and navigation.

- ✓ Real-time analysis
- ✓ Effectively works with moving backgrounds
- ✓ Integrated "eagle eye" zooming algorithm that allows to operate at larger distances
- ✓ Optimization for high-resolution cameras (4K+)
- ✓ Proprietary algorithm for suspect's re-identification and tracking based on their appearance

**The software runs either on drone edge computing units or Remote Command Center servers connected with optical and thermal cameras.**

**What makes Scylla AI-powered solution stand out:**

# Scylla Technology

Scylla is a leading developer and provider of AI-powered physical security technology. We augment your existing security infrastructure with next-gen AI solutions to minimize costs, avoid human-factor errors and provide new tools to boost security and operational effectiveness.

## Intrusion Detection & Perimeter Protection

Scylla AI-powered software is trained to identify humans and vehicles in restricted areas, impressively minimizing false alarms by up to 99.95%.

## Behavior Recognition & Anomaly Detection

Scylla behavior recognition system allows security professionals to detect and identify a wide range of anomalous events and environments in real-time.

## Thermal Screening

Scylla thermal scanning technology effectively detects elevated skin temperature in high-traffic areas through non-invasive target screenings.

## Object Detection

Scylla utilizes your existing security infrastructure and transforms it into a proactive security system detecting and identifying firearms, suspicious objects and protective personal equipment.

## Drone Security

Scylla AI technology effectively works on drone cameras with non-static environments and backgrounds keeping a watchful eye on your valued assets and operations.

**Scylla makes the camera  
surveillance environment real-time  
proactive instead of reactive.**
